Ezra Apple

Software Engineer | AI Products | Former Co-Founder

ezraapple.dev GitHub LinkedIn ezraapple.engineer@gmail.com

Education

University of California, Berkeley May 2025

B.S. in Electrical Engineering and Computer Science

Experience

Replo (YC S21) | *Software Engineer, AI Agent Platform* Oct 2025 – Oct 2026

- Helped architect and launch Replo's **new AI platform for e-commerce** through closed beta, open beta, and general availability, with work spanning reusable templates, agent behavior, and live page previews.
- Redesigned Replo Agent's **persistent memory** around compact user and project context, on-demand retrieval, and automatic curation, and shipped a user-facing memory browser.
- Designed and ran **agent evaluations** of context and instruction changes using customer-derived and synthetic editing tasks, measuring task correctness, cost, and latency.
- Led consolidation of Replo's **internal agent skills and development workflows**, making engineering, design, and support knowledge discoverable and reusable across coding agents.

Decyphr AI | *Co-Founder & CTO* Jan 2025 – Aug 2025

- Co-founded AI video translation startup, accepted into **UC Berkeley SkyDeck Pad-13** incubator program.
- Owned end-to-end MVP for AI-driven video translation across **25+ languages**, spanning authentication, media upload, processing orchestration, and launch site.
- Ran **closed beta with 10+ content creators**, translating feedback into product refinements and go-to-market validation.
- Architected a serverless media-processing pipeline on **AWS** (**S3, Lambda, Step Functions, SES**) with fault-tolerant retries for long-running translation jobs.

Lawrence Berkeley National Laboratory | *Machine Learning Researcher* Oct 2023 – Jun 2025

- Applied **random forests and Bayesian optimization** to ion-source diagnostic data, modeling accelerator performance and exploring configurations to maximize ion output.
- Presented findings to senior researchers supporting **heavy-element synthesis research**, including the element 120 program.

Projects

ShoutOut | *Local-First macOS Dictation App*

- Built and shipped a local-first macOS dictation app in **Swift** that inserts transcribed speech into other apps, with signed, notarized releases and automatic updates.
- Designed a low-friction interaction model with hold-to-record, double-tap hands-free mode, menu bar controls, recording overlay feedback, and first-run permission onboarding.
- Implemented swappable on-device transcription engines using **Apple Speech**, **Apple Dictation**, and **WhisperKit/Core ML**, with dictionary-aware cleanup and spoken-punctuation formatting.

Skills

Languages: TypeScript, Python, Swift, SQL
AI & Agents: Agent workflows, agent evaluation, persistent memory, internal agent skills, MCP integrations
ML & Data: PyTorch, Hugging Face Transformers, scikit-learn, NumPy, pandas
Backend & Infrastructure: Node.js, tRPC, PostgreSQL, Cloudflare Workers, AWS, Docker, GitHub Actions
Frontend & Desktop: React, Next.js, Tailwind CSS, SwiftUI, macOS
